

Your all-in-one cloud platform
for **effortless media localization**,
integrated with the **complete set**
of OOONA's production tools.

WHAT IS OOONA INTEGRATED

OOONA Integrated is the company's flagship platform for the management and production work involved in any type of media localization project. It represents the culmination of years of development work and is a powerful combination of two distinct product lines, OOONA's translation management system and the company's steadily-expanding toolset.

These have seamlessly converged into a unified, end-to-end, highly secure and scalable system that addresses any media localization need. It offers instant and full visibility over the localization pipeline and can accommodate any scripting, subtitling, captioning or dubbing workflow.

EFFORTLESS MEDIA LOCALIZATION

OOONA Integrated offers customizable project and client dashboards, automated and bulk work assignments, and real-time project and user metrics, including a profit and loss view.

It includes access control for both internal and external users, and automates the import of client orders and updates to customer management or scheduling systems post-delivery. The platform also provides a mobile app for quick, remote task allocation and approval, catering to modern media localization workflows. Additionally, it features APIs for seamless integration with a range of bespoke third-party language tools.

SECURITY, STABILITY, SCALABILITY

OOONA Integrated, hosted on AWS, operates entirely online, leveraging advanced cloud technologies and security measures to ensure scalability, stability, and safeguarding client data.

Boasting the TPN Gold Shield for cloud security, ISO 27001 certification, and passing audits by major Hollywood studios and streaming platforms, it is continuously tested and monitored, providing a secure and scalable solution for organizations of any size and accommodating fluctuations in work volume with ease.

GLOBAL REACH WITH SEAMLESS EFFICIENCY

OOONA Integrated is trusted by global media localizers and smaller language service providers alike and serves as the backbone for their audiovisual operations.

Recognized as the market leader in commercial online tools for video localization, OOONA offers a comprehensive solution, including a powerful **API** with seamless integration capabilities into customers' management systems. This allows for automatic ingest of work orders, file deliveries and updates of client schedules, providing enhanced efficiencies in their workflows.

BENEFITS

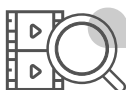

Instant and full visibility
of the entire localization
pipeline

Live project status,
and profit and loss reporting

Vast array of workflow
automation tools

Bulk actions for mass
change orders and
batch file exports

Resource availability
and mobile app for remote
task allocation

Access control
for internal and
external users

Production efficiency
for infinite scalability

Client dashboards and
seamless content delivery

API integration for automatic
import of client orders and
project deliveries
